MM Optimization Algorithms Kenneth Lange

MM Optimization Algorithms offers an overview of the MM principle, a device for deriving optimization algorithms satisfying the ascent or descent property. These algorithms can separate the variables of a problem, avoid large matrix inversions, linearize a problem, restore symmetry, deal with equality and inequality constraints gracefully, and turn a nondifferentiable problem into a smooth problem.

The author presents the first extended treatment of MM algorithms, which are ideal for high-dimensional optimization problems in data mining, imaging, and genomics; derives numerous algorithms from a broad diversity of application areas, with a particular emphasis on statistics, biology, and data mining; and summarizes a large amount of literature that has not reached book form before.

Audience: This book is intended for those interested in high-dimensional optimization. Background material on convexity and semidifferentiable functions is derived in a setting congenial to graduate students.

Contents: Chapter 1: Beginning Examples; Chapter 2: Convexity and Inequalities; Chapter 3: Nonsmooth Analysis; Chapter 4: Majorization and Minorization; Chapter 5: Proximal Algorithms; Chapter 6: Regression and Multivariate Analysis; Chapter 7: Convergence and Acceleration; Appendix A: Mathematical Background.

Typically the book MM Optimization Algorithms has a lot associated with on it. So when you check out this book you can get a lot of advantage. The book was authored by the very famous author. The author makes some research ahead of write this book. This particular book very easy to read you can obtain the point easily after reading this article book.

Nora Mickey:

As we know that book is vital thing to add our understanding for everything. By a guide we can know everything we really wish for. A book is a set of written, printed, illustrated or blank sheet. Every year ended up being exactly added. This e-book MM Optimization Algorithms was filled about science. Spend your extra time to add your knowledge about your research competence. Some people has different feel when they reading the book. If you know how big advantage of a book, you can truly feel enjoy to read a guide. In the modern era like today, many ways to get book which you wanted.

Ann Clark:

As a college student exactly feel bored in order to reading. If their teacher expected them to go to the library or even make summary for some book, they are complained. Just minor students that has reading's internal or real their pastime. They just do what the professor want, like asked to go to the library. They go to presently there but nothing reading significantly. Any students feel that examining is not important, boring and also can't see colorful photos on there. Yeah, it is being complicated. Book is very important in your case. As we know that on this age, many ways to get whatever we want. Likewise word says, many ways to reach Chinese's country. Therefore , this MM Optimization Algorithms can make you sense more interested to read.
