Cynthia Dacillo Franklin Susanibar

The Challenge that the speech therapist always faces when assessing the conduct of the patient's breathing mode, i.e. to assess respiration. This means the permeability tests through the rhino hygrometric technique, in which the expiration air system condenses when in contact with a cold surface such as the mirror of Altmann or Glatzel, fails to show how the air enters airways; also it may indicate a possible obstruction. Therefore, to achieve the objectives outlined in the phonoaudiological assessment is to delineate the content of the assessment, based on the approaches of Marchesan, Di Francesco, Tessitore et al. who created the Protocol on the Phonoaudiological Assessment of Breathing with scoring - PAFORE) It contains topics relevant to the assessment of the respiration which includes among others a permeability test of expiratory airflow using the oronasal plate adapted by Susanibar (POAS). The publication includes: the book, oronasal plate, registration graph paper, Protocol on Phonoaudiological Assessment of Breathing with Scoring.
