This volume is devoted to the use of the quantum-like description that has been successful in describing numerous physical scenarios in many branches of physics, including the dynamics of charged particle beams in accelerators and the propagation of electromagnetic wave energy in nonlinear media such as plasmas and optical fibres. The quantum-like approach seems, therefore, to form a common basis for understanding the observations in many diverse field of science. This volume is intended for use by graduate students and researchers in high energy physics and mathematical physics.

**Charles Branch:**

As a college student exactly feel bored to reading. If their teacher requested them to go to the library in order to make summary for some book, they are complained. Just little students that has reading's soul or real their interest. They just do what the educator want, like asked to go to the library. They go to there but nothing reading critically. Any students feel that reading is not important, boring and also can't see colorful images

on there. Yeah, it is to become complicated. Book is very important for you personally. As we know that on this era, many ways to get whatever we really wish for. Likewise word says, many ways to reach Chinese's country.
